Technical Skills

Languages & Web: Java, Python, JavaScript, TypeScript, React, Redux, Node.js, Spring Boot, HTML5, CSS

Databases & Tools: MySQL, PostgreSQL, MongoDB, Git, GitHub, Postman, Linux/Unix

Data & Distributed Systems: Hadoop, HDFS, Hive, HBase, Spark (RDDs, SparkSQL, PySpark), Kafka, Sqoop

Cloud & DevOps: AWS (EC2, S3, Lambda, IAM, VPC), **Google Cloud** (Cloud Run, DataProc, BigQuery, Spanner, Dataflow, Composer), **Azure** (Databricks, Data Lake, Data Factory), Docker, Kubernetes, Jenkins

AI & Coding Tools: Cursor AI, CodeX, Claude

Education

California State University, East Bay *M.S., Computer Science*, GPA: 4.0/4.0

Aug 2025 – Jan 2027

Sree Vidyanikethan Engineering College *B.Tech, IT*, GPA: 8.5/10.0

Aug 2015 – May 2019

Experience

Software Engineer, Data & AI - Glider.ai

April 2021 – Dec. 2024

- Engineered an internal **AI-driven access automation system** that analyzed Jira support tickets and dynamically enforced **RBAC policies**, reducing manual intervention by **90%** and improving access resolution time by **70%**.
- Architected a scalable **event ingestion pipeline** using backend services, **Apache Kafka**, and **Google Cloud Storage**, processing over **1M+ user interaction events daily** to create a replayable analytics data lake.
- Designed and maintained **Apache Airflow batch pipelines** processing 1M+ daily events, reducing manual reporting effort by **80%** and enabling automated engagement and performance analytics dashboards.
- Led a full-stack redesign of the **assessment creation platform** using **React, Node.js, Spring Boot, MySQL, and MongoDB**, improving user experience by **65%** and increasing productivity by **50%**.
- Developed a scalable **Dynamic Assessment Generation module** that automated custom assessment creation based on client-defined criteria, reducing setup time by **60%** and increasing client satisfaction by **40%**.
- Engineered enterprise integrations including **ChatBot screening enhancements** and **ATS REST APIs (Bullhorn, Lever, LiveHire)**, increasing recruiter screening efficiency by **50%** and reducing manual onboarding.

Systems Engineer - Infosys

Aug. 2019 – Sep. 2020

- Developed and enhanced **full-stack enterprise applications** by debugging backend services, optimizing SQL queries, and resolving production issues across web, application, and database layers.
- Improved database performance by **70%** through query optimization, indexing strategies, and backend logic refinement, reducing latency and improving overall system reliability.

Projects

Distributed Systems | MIT 6.824

- Implemented MapReduce, Raft consensus (leader election, log replication), and a fault-tolerant distributed key-value store to ensure consistency and crash recovery.

Clarify | LLM-Powered Semantic Assistant Browser Extension

- Developed a browser extension that extracts highlighted text and full-page DOM context, sending structured prompts to an LLM API to generate context-aware semantic interpretations in real time.

Machine Learning-Based Phishing Detection Against AI-Generated Attacks

- Designed and trained machine learning phishing detection models (TF-IDF + Logistic Regression/SVM) and evaluated their robustness against AI-generated phishing emails, identifying performance gaps and proposing transformer-based improvements.

PhishLens | Cloud-Native Image Analysis Platform | AI Full Stack Application

- Architected and deployed a full-stack ERN application integrating Google Vision and Gemini APIs with OAuth ingestion, Firebase storage, and Cloud Run to detect phishing images with explainable risk scoring and monitored cloud analytics.

Online Shopping Application | Full-Stack WebApplication

- This project is a complete e-commerce solution featuring product catalog, shopping cart, secure payment processing, order management, and admin dashboard for inventory control.
